

## Centrifugally Lift Off Sprags Freewheels

# RSCI 20-130

### TYPE

Type RSCI is a centrifugal lift off sprag type freewheel with the inner race rotating. Only the inner race is designed for freewheeling. It is a non self-supported type.

Bearings must be provided to ensure concentricity of the inner and outer races and support axial and radial loads, as shown overleaf. Concentricity and run-out limits must be observed. The RSCI type accepts all types of lubricant currently used in power transmission equipment.

It is possible to mount these freewheels directly in gear-boxes without separate lubrication. An oil mist is generally sufficient. Grease lubrication may be acceptable if the unit works mostly in overrunning condition, as on E-motors.

When used as a backstop, it must be checked that the overrunning speed will not go below the minimum speed given in the characteristics table. Please refer to page 74 (RSCI 180–300) for further information.

**NOTES**

- 1)  $T_{max} = 2 \times T_{KN}$   
» Refer to Selection page 7 to 11
- 2) This maximum allowable torque transmission speed  $n_{max}$  must not be exceeded when transmitting torque
- 3) This minimum allowable overrunning speed  $n_{min}$  should not be reduced under continuous operation. Possible reduction of this minimum speed on request
- 4) Inner race overruns  
Keyway to DIN 6885.1
- 5) Tolerance +1

Cover F8 must be ordered separately  
» Refer to mounting and maintenance instructions page 12 to 13

Other bore diameters on request
